```
1 # This file is auto-generated from the current
   state of the database. Instead
 2 # of editing this file, please use the migrations
  feature of Active Record to
 3 # incrementally modify your database, and then
   regenerate this schema definition.
 4 #
 5 # This file is the source Rails uses to define your
    schema when running `bin/rails
6 # db:schema:load`. When creating a new database,
   bin/rails db:schema:load` tends to
 7 # be faster and is potentially less error prone
   than running all of your
 8 # migrations from scratch. Old migrations may fail
   to apply correctly if those
 9 # migrations use external dependencies or
   application code.
10 #
11 # It's strongly recommended that you check this
  file into your version control system.
